

T50 SIDE PILLAR

Dropside lock för light trucks - dropside heights from 300 mm

Side pillar and lock closed

T50 dropside lock system for light vehicles with dropside heights from 300 mm. The aluminium lock is fitted to the dropsides to create an open load area with unrestricted access.

T50 is fitted with a safety catch and load indicator that prevents unintentional or risky operation. The load indicator makes the handle stiffer to operate when there is pressure on the inside of the dropside panel.

The mechanism is designed to minimize projecting parts when in the open position.

The system is used as a standard solution on most established trucks and has been tested according to EN12642

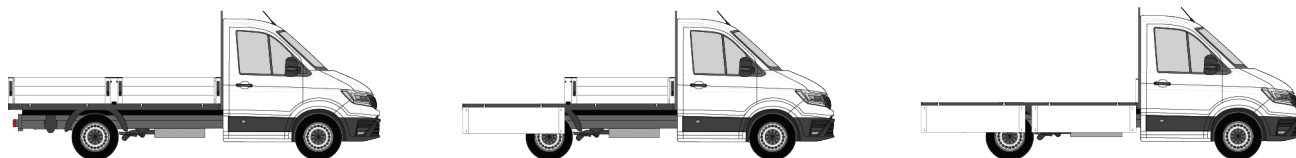

-Low weight and good corrosion resistance

-Integrated locks in the dropside create an open load area

-Load indicator preventing unintentional opening

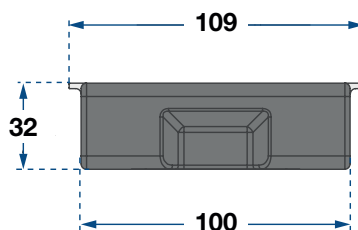

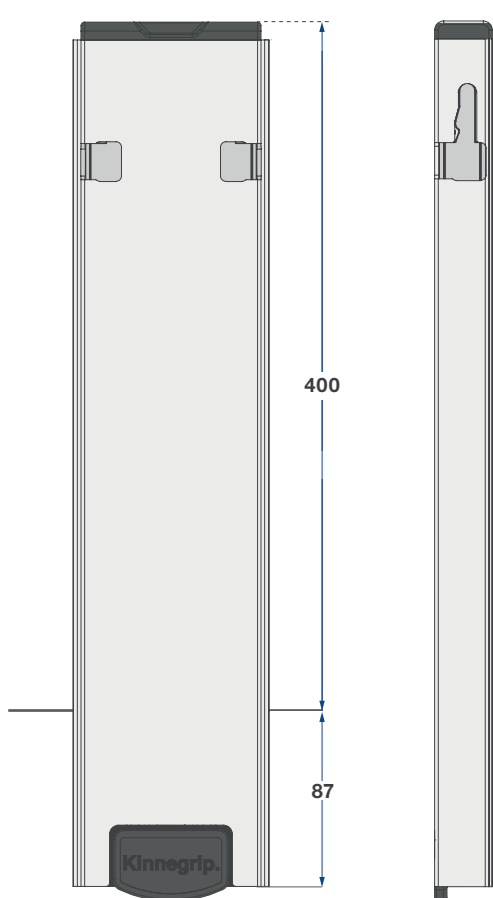

-Locking mechanism designed to minimize protruding parts in open position

-Customized handle with logo (Minimum order quantity)

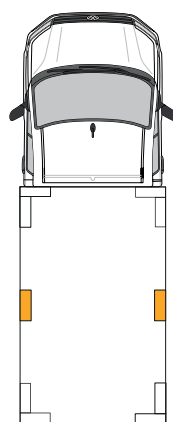

T50 side pillar is assembled in combination with 2 pcs T50 locks. The locks are mounted on the dropsides and can be folded. The side pillar can be removed which creates an open loading area. It can also function as a separator to create different loading areas as well as support for a canopy.
